DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, 49, 52-58, 66, and 71, drawn to separate controls of thermal output of a temperature modifying device and an air circulating system, classified in class 236, subclass 49.3.
- II. Claims 18-48, 50, 51, 59-65, 67-70, 72, and 73, drawn to generating and displaying air filter output information, classified in class 236, subclass 94.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I (as represented by independent claims 1, 49, 52, and 71) has separate utility such as in a system wherein air filter output information is not generated and displayed; invention II (as represented by independent claims 18, 34, 50, 51, 59, 67, 72, and 73) has separate utility such as in a system wherein an air circulating system is not operated independently of a temperature modifying device. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 3744

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
